Press Release

Another system delivered to Constanta in Romania

Located in the Black Sea area - Constanta ROMANIA, Santierul Naval Constanta SA is ranked among the largest new-building, repairs and conversions shipyards in Europe, the world's first-class shipbuilder for medium range products & chemical tankers.

For many years, QMI have provided Oil Mist Detection equipment to Santierul for their new builds, most notably Atmospheric systems in ships machinery spaces. Their latest build – known only as Hull 592 at present – is almost at completion and we are pleased to congratulate Santierul on this latest project and we look forward to seeing this latest vessel sailing through the Bosphorus Strait and onwards towards joining the global fleet.

With almost five million dwt delivered during its years of activity both to Romanian and first class European owners, new-buildings ranging both in size – from 1,100 dwt Chemical Tanker to Aframax / Suezmax Tankers or Capesize Bulk Carriers, Santierul Naval Constanta SA is backed up by the experience, professionalism and teamwork of its employees.
